Exam : **400-251**

Title : CCIE Security Written Exam
(v5.0)

Version : DEMO

1.What are the most common methods that security auditors use to access an organization's security processes? (choose two)

- A. physical observation
- B. social engineering attempts
- C. penetration testing
- D. policy assessment
- E. document review
- F. interviews

Answer: AF

2.Which three statements about WCCP are true? (choose three)

- A. if a specific capability is missing from the capabilities Info Component, the router is assumed to support the default capability.
- B. the web cache transmits its capabilities as soon as it receives a Receive ID from a router
- C. the minimum WCCP-Fast Timers message interval is 500 ms.
- D. the assignment method supports GRE encapsulation for sending traffic
- E. if the packet return method is missing from a packet return method advertisement, the web cache uses the layer 2 rewrite method
- F. the router must receive a valid receive ID before it negotiates capabilities.

Answer: ACF

3.Refer to the exhibit,

```
authentication priority dot1x mab
authentication order dot1x mab
authentication event fail action next-method
authentication event server dead action reinitialize vlan 50
authentication host-mode multi-auth
authentication violation restrict
```

Which two effects of this configuration are true? (Choose two)

- A. the switch periodically sends an EAP-Identity-Request to the endpoint supplicant
- B. the device allows multiple authenticated sessions for a single MAC address in the voice domain
- C. if the TACACS+ server is unreachable, the switch places hosts on critical ports in VLAN50
- D. if the authentication priority is changed, the order in which authentications is performed also changes
- E. if multiple hosts have authenticated to the same port, each can be in their own assigned VLAN
- F. the port attempts 802.1x authentication first, and then falls back to MAC authentication bypass.

Answer: CF

4.Which 2 statements about 6to4 tunneling are true? (choose two)

- A. it provides a /128 address book.
- B. it supports static and BGPv4 routing
- C. it provides a /48 address block
- D. it supports managed NAT along the path of the tunnel
- E. the prefix address of the tunnel is determined by the IPv6 configuration of the interface

F. it supports multihoming

Answer: BC

5. Which 2 statements about a wireless access point configured with the guest-mode command are true?
(Choose two)

A. it can support more than one guest mode SSID

B. it supports associations by client that perform passive scans

C. it allows client configured without SSID to associate

D. it allows associated client to transmit packet using its SSID

E. if one device on a network is configured in guest-mode, client can use the guest-mode SSID to connect to any device in the same network.

Answer: BC
